Parameter-Efficient Fine-Tuning (PEFT) — Using LoRA and Hugging Face PEFT Library

Lab19_N.RUKMINI_2403a52402

STEP 1 — Install & Import Libraries

```
# Install (run once)
!pip install torch transformers datasets peft accelerate

# Import libraries
import torch
from transformers import AutoModelForSequenceClassification, AutoTokenizer
from datasets import load_dataset
from peft import LoraConfig, get_peft_model
```

```
Requirement already satisfied: torch in /usr/local/lib/python3.12/dist-packages (2.10.0+cpu)
Requirement already satisfied: transformers in /usr/local/lib/python3.12/dist-packages (5.0.0)
Requirement already satisfied: datasets in /usr/local/lib/python3.12/dist-packages (4.0.0)
Requirement already satisfied: peft in /usr/local/lib/python3.12/dist-packages (0.18.1)
Requirement already satisfied: accelerate in /usr/local/lib/python3.12/dist-packages (1.13.0)
Requirement already satisfied: filelock in /usr/local/lib/python3.12/dist-packages (from torch) (3.25.2)
Requirement already satisfied: typing-extensions>=4.10.0 in /usr/local/lib/python3.12/dist-packages (from torch) (4.15.0)
Requirement already satisfied: setuptools in /usr/local/lib/python3.12/dist-packages (from torch) (75.2.0)
Requirement already satisfied: sympy>=1.13.3 in /usr/local/lib/python3.12/dist-packages (from torch) (1.14.0)
Requirement already satisfied: networkx>=2.5.1 in /usr/local/lib/python3.12/dist-packages (from torch) (3.6.1)
Requirement already satisfied: jinja2 in /usr/local/lib/python3.12/dist-packages (from torch) (3.1.6)
Requirement already satisfied: fsspec>=0.8.5 in /usr/local/lib/python3.12/dist-packages (from torch) (2025.3.0)

  super().__init__(loader)
```

[25/25 02:56]

```
Predicted label: 1
```

STEP 8 — Comparison (PEFT vs Full Fine-Tuning)

Parameter-Efficient Fine-Tuning (PEFT) is significantly more efficient than traditional full fine-tuning. In full fine-tuning, all parameters of the model are updated, which requires large GPU memory and longer training time. In contrast, PEFT updates only a small number of

additional parameters (LoRA adapters), keeping the base model frozen. This reduces memory usage drastically.

Training time is also much faster in PEFT because fewer gradients are computed. While full fine-tuning may achieve slightly higher accuracy in some cases, PEFT provides comparable performance with much lower cost. Additionally, PEFT allows multiple task-specific adapters to be stored instead of multiple full models, saving storage.

Overall, PEFT is more scalable and practical for real-world applications involving large language models.

STEP 9 — Lab Report (Ready Content)

Objective

To implement Parameter-Efficient Fine-Tuning using LoRA and Hugging Face PEFT library for efficient model adaptation.

🔹 Dataset Description

The dataset used is the IMDb sentiment analysis dataset containing movie reviews labeled as positive or negative. It consists of natural language text collected from online sources. The dataset includes informal expressions, making it suitable for NLP tasks. It was preprocessed and tokenized for transformer models. A subset of 500 training and 200 testing samples was used.

🔹 Setup

Installed required libraries: torch, transformers, datasets, peft, accelerate.

🔹 LoRA Configuration Rank (r): 8 Alpha: 16 Dropout: 0.1 Target modules: q_lin, v_lin 🔹 Results Model trained successfully Achieved good sentiment classification performance Faster training compared to full fine-tuning 🔹 Performance Analysis Reduced memory usage Faster convergence Comparable accuracy 🔹 Comparison

PEFT is more efficient than full fine-tuning in terms of memory, speed, and scalability.

🔹 Conclusion

PEFT using LoRA is an effective technique for adapting large transformer models efficiently with minimal computational resources.

Theory Answers

1. What is PEFT?

PEFT is a technique that fine-tunes only a small subset of parameters instead of the entire model.

2. Why is full fine-tuning impractical?

Because it requires:

High memory Long training time Expensive hardware 3. What is LoRA?

LoRA adds small trainable matrices to large models to reduce training cost.

4. What are low-rank matrices?

Matrices with smaller dimensions used to approximate large matrices efficiently.

5. How does PEFT reduce memory?

By freezing base model and training only small adapter layers.

6. What are adapter layers?

Small additional layers inserted into model for task-specific learning.

7. Applications Chatbots Sentiment analysis Translation Question answering
